

Pure facts

Washing times (complete) with NORDIC DINO compared with Manual cleaning.

Benefits

- ★ Reduced man hours
- ★ Improved aircraft availability
- ★ Fuel savings due to lower aerodynamic drag
- ★ Reduced usage of water and detergent
- ★ Improved health and safety environment
- ★ Wireless control unit option available

NORDIC DINO II/777+/4380 will help get the aircraft fleet in gleaming condition - and keep it that way!

About us

Aviator is a Company that invented the Nordic Dino aircraft washing 30 years ago and continues to manufacture the product today. In recent years there has been a significant increase in interest from airlines investing in this equipment and the Aviator has continued to develop the product to meet increasing market demands.

Since its introduction around 100 units have been built and sold to customers from all over the world. These innovative washing robots are working reliable, economically and above all safely for both Commercial Airlines as well as Military customers, continuing to deliver excellent returns on investment year after year.

Aviator is a provider of passenger, ramp, cargo and de-icing services with more than 3,800 employees working at 24 stations in Denmark, Finland, Norway, Sweden, and United Kingdom. In a separate Business Section the unique aircraft washing robot Nordic Dino is manufactured and marketed to the world-wide industry.

Why do you need a clean aircraft?

Presenting
NORDIC DINO 4380
NORDIC DINO 777+
NORDIC DINO II

There are many good reasons. The primary one is of course safety but a substantial part is also image.

A sparkling clean aircraft projects a picture of efficiency, safety and success. A dirty plane communicates the very opposite.

However, even more important are tangible benefits of a clean aircraft such as lower fuel consumption, extended paint life and fewer corrosion issues.

This is how it works

NORDIC DINO is a computerised and self contained system, purpose built for cleaning aircraft exteriors.

The system consists of a mobile power unit, spray nozzles and rotating cleaning brushes. A lightweight wireless remote control permits simple and safe one man operation of the power unit and the cleaning brushes.

NORDIC DINO meets the requirements for washing aircraft exteriors and incorporates safety features designed to prevent accidental personal injury or aircraft damage.

Which NORDIC DINO is most suitable for your aircraft?

The newest, **NORDIC DINO 4380**, is designed for washing wide bodied aircraft such as the A380. It has a three arm system with a longer under arm and shorter top arm to reach over larger wing areas. The washing height exceeds 11 meters.

NORDIC DINO 777+ has been specially designed for washing B777, A330 and B747, but works well on any wide-bodied aircraft. It also has a three arm system and can clean the top of B747 aircraft. The washing height is 11 meters.

NORDIC DINO II has been designed specifically for narrow bodied aircraft such as B757 or B767. The washing height is 8,5 meters.

NORDIC DINO II works perfectly in combination with NORDIC DINO 777+ or NORDIC DINO 4380 on any wide bodied aircraft.
